BOYNE VALLEY TRAILS

c/o Town of Treherne

Box 30

Treherne MB R0G 2V0

The valley bottom is dominated by wetland vegetation typical of prairie marshes. Dominant species are cattails, reed grass, sedges, and white top grass. Willows are the most common shrubs. A bur oak stand is on the eastern slope, numerous Manitoba maple, shrubs, trees, and trembling aspen are found throughout the area.

The Boyne River Valley provides natural habitat for most of the animal species of southern Manitoba and includes: white tailed deer, mink, raccoon, beaver, muskrat, and hares. Some birds that inhabit the area include great blue heron, wood duck, mallard, red-wing and yellow-head blackbirds.

The Boyne Valley Nature Trails are located on land owned by John and Evelyn Green and Family and Timmerman Enterprises.

The Boyne Valley Trails Committee wishes to acknowledge them for their co-operation and long term commitment to the project.

TREHERNE PATHWAYS and BOYNE VALLEY NATURE TRAIL

"A Scenic View"
CPR Stone Archway

The Boyne Valley
Nature Trail
"Where Marsh and
Prairie Meet"

This trail provides visitors with a unique opportunity to experience wetland vegetation and wildlife as well as the prairie ecosystem on the upper valley slopes.

Treherne Pathways Project

Goals of the Project:

- To provide active living enthusiasts with walkways and cross country ski trails;
- To develop an interpretive trail in the Boyne Valley to provide area residents, students and tourists an opportunity to attain a better understanding of natural march and prairie habitat.

The project consists of a 2.5 km pathway in the Town of Treherne and a 1.5 km nature trail in the Boyne Valley on the east side of Treherne between Hwy #2 and the CPR line.

The town trail utilizes existing sidewalks while the nature trail is part grass and part crushed stone. Two 80 ft. bridges, one covered, cross the Boyne River.
